

Our Purpose: Building better agricultural systems that enhance nature and address climate change

Our Impact Goals are:

Better systems, structures and practices that lead to a reduction in harm from agriculture.
Strong, effective organisations working to promote nature and climate positive farming.

We will support:

- Initiatives that raise the ambition of governments and others to reform policy and legislation that balance climate, nature, and food production.
- and
- Work that demonstrates the benefits of climate and nature positive farming.

We prioritise working with organisations that:

- Are working to hold governments and institutions to account.
- and/or
- Are working collaboratively to strengthen the collective voice.

And who are working towards these key outcomes:

- Farming systems that prioritise nature and climate positive farming.
- Improved legislation and increased enforcement action from relevant regulatory bodies.
- Strong regulatory baseline that prevents environmental harm.
- More farmers taking a nature and climate positive approach to their business.

Through our role as a grantmaker, we...

Like to fund important work that might otherwise struggle to attract funding.

Focus on tackling the root causes of social and environmental problems to promote long term change.

Make grants in the form that works best for each individual organisation, balancing unrestricted, core, and project funding.

Offer multi-year grants to help organisations plan for the future.

Will collect and record the information we need to understand the difference our funding makes.

Will build positive, trusting relationships with grantholders; ensuring we learn with and from them.
